

— QT GLOBAL SOFTWARE

We Develop, Secure, And Deploy
Cutting-Edge Digital Solutions.

WHO WE ARE

At QT Global Software LTD, we turn your vision into cutting-edge software solutions designed specifically for your needs. Our dedicated team strives to deliver innovative technology that drives your success and cultivates long-lasting partnerships. Let's shape the future together.

OUR MISSION

To empower businesses through innovative and secure software solutions that drive growth, enhance productivity, and inspire change. Through a culture built on collaboration and excellence, we are committed to surpassing expectations and fostering the success of our clients and team.

OUR VISION

To be the leading force in digital transformation, where technology and people unite to shape the future. We strive to create impactful solutions that enrich lives, champion excellence, and position our employees and clients at the forefront of global innovation.

QT PRODUCTS

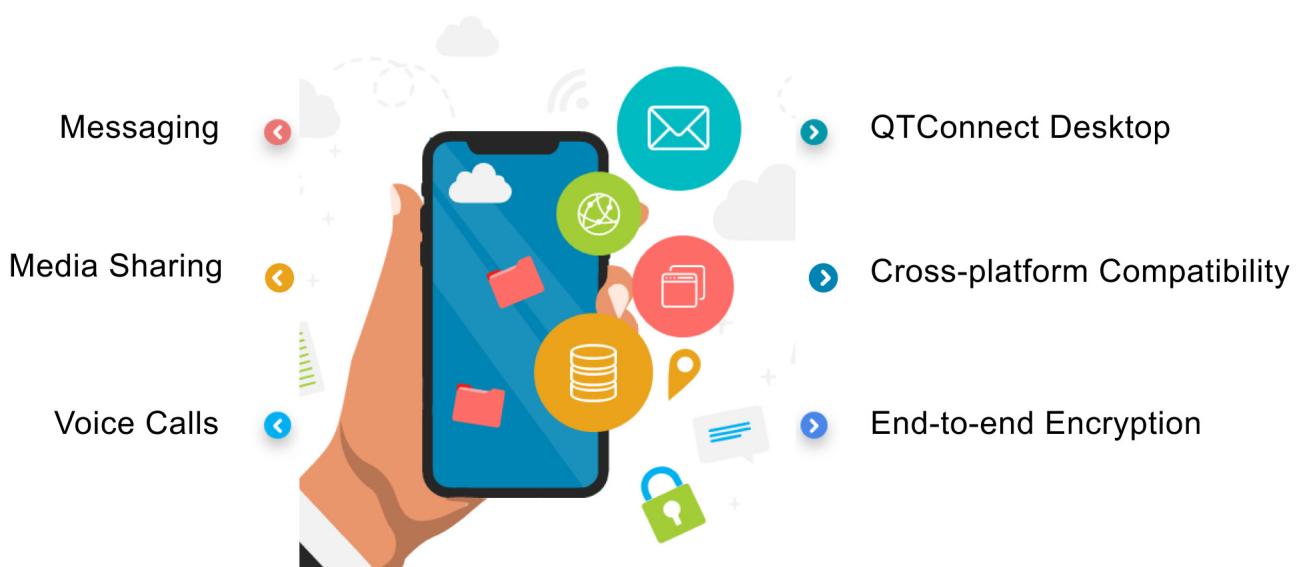

QTCONNECT MESSENGER

QTConnect is a highly secure, end-to-end messenger application available on both mobile devices and desktop. It offers end-to-end encryption, ensuring that all messages, voice calls, and shared media are securely encrypted and only accessible to the sender and intended recipient, providing a high level of privacy.

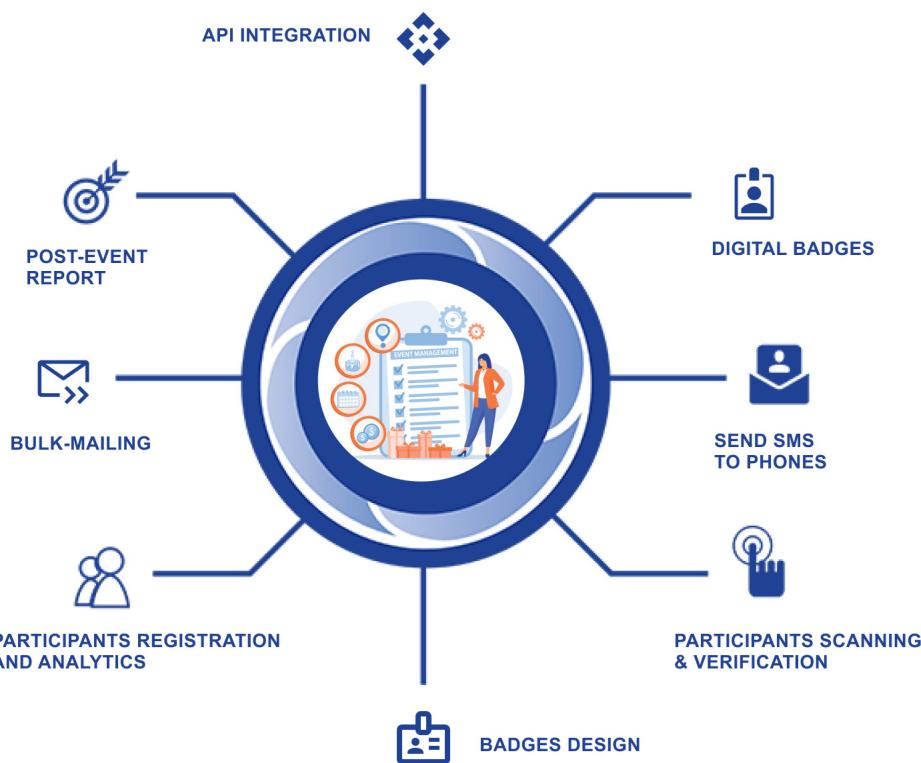

With its robust security features, comprehensive messaging capabilities, and cross-platform support, QTConnect is designed to meet the needs of organizations and users looking for a reliable and private communication solution.

EVENT MANAGEMENT SYSTEM-EMS

The EMS is a customizable solution tailored to meet unique user needs, supporting the accreditation of participants. Designed for events with 200 to over 2,000 attendees, it provides a centralised, bespoke system for both event planners and attendees.

VISITORS MANAGEMENT SYSTEM-VMS

VMS is a web and mobile-based application designed to help institutions and companies track, monitor, and manage visitors and employees entering their premises using cutting-edge technology. The system offers a comprehensive solution for both visitor and staff monitoring.

INTEGRATED RESOURCES MANAGEMENT SYSTEM-RMS

A software solution that helps organizations plan, allocate, and track resources and tasks throughout the lifecycle of an institution.

QT RWANDA PROJECTS

CIVIL REGISTRATION & VITAL STATISTICS- CRVS

The Civil Registration and Vital Statistics framework records all essential civil events. It ensures accurate and comprehensive documentation for vital statistical purposes and legal documentation.

SOCIAL REGISTRY SYSTEM-SRS

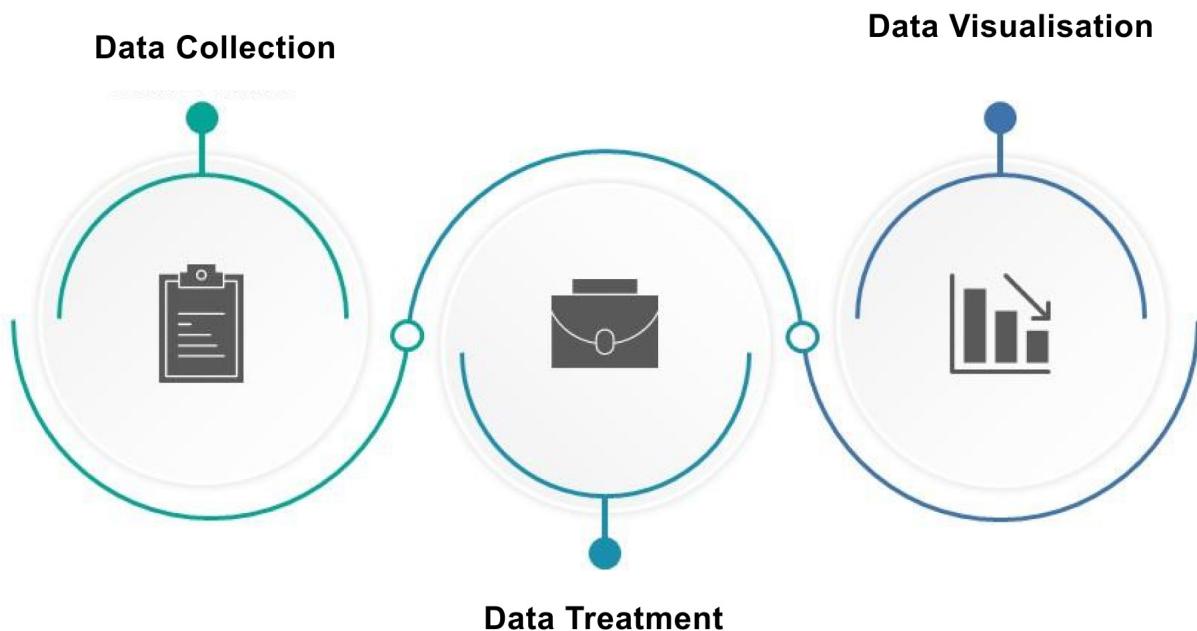

A system designed to act as a central hub for social programs, facilitating the objective assessment of various factors to accurately identify economically disadvantaged and at-risk populations (Underscore population).

DISABILITY MANAGEMENT INFORMATION SYSTEM-DMIS

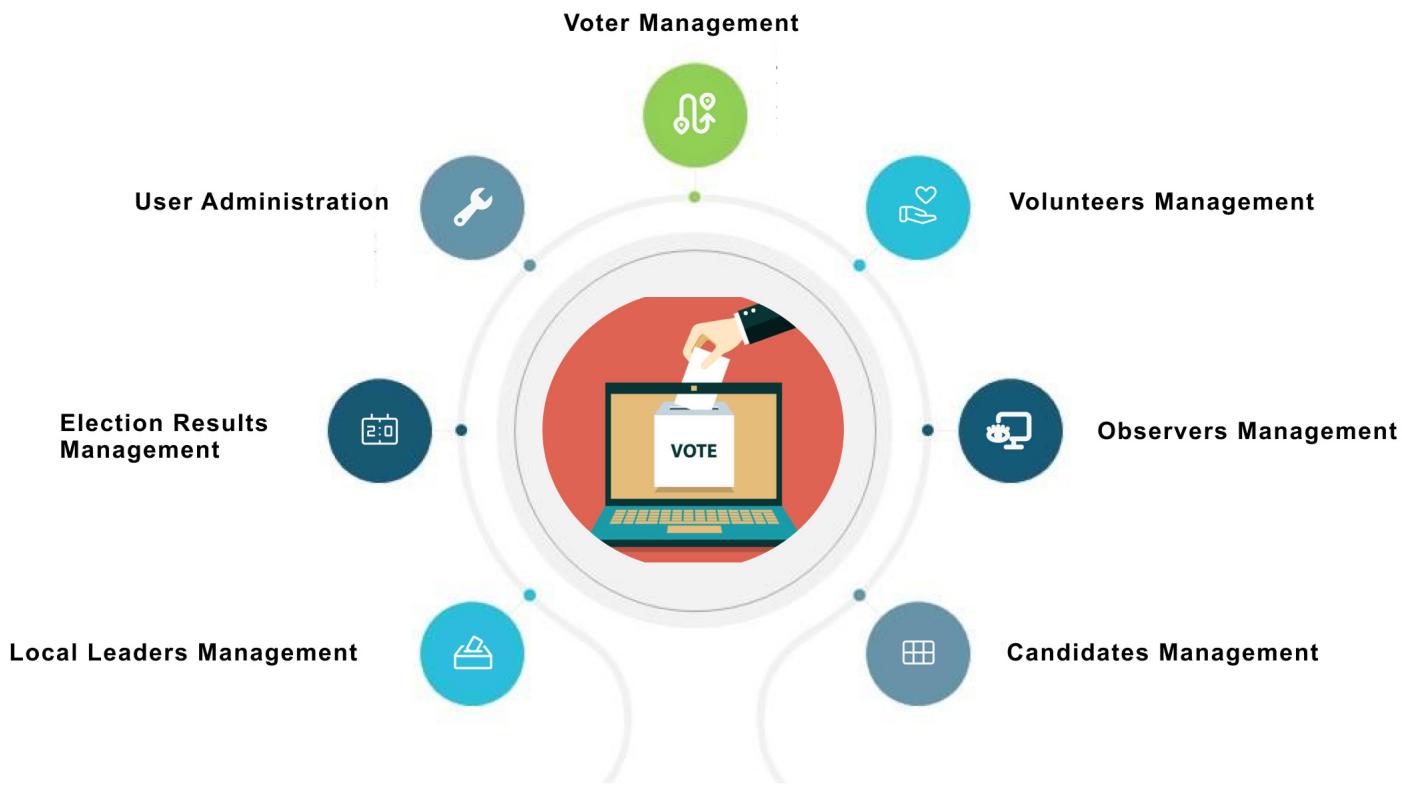

A specialised software application for efficiently collecting and managing data on individuals with disabilities. It streamlines data collection, ensuring accurate, and organized records; tailored to the specific needs of data management.

ELECTORAL INFORMATION MANAGEMENT SYSTEM-EIMS

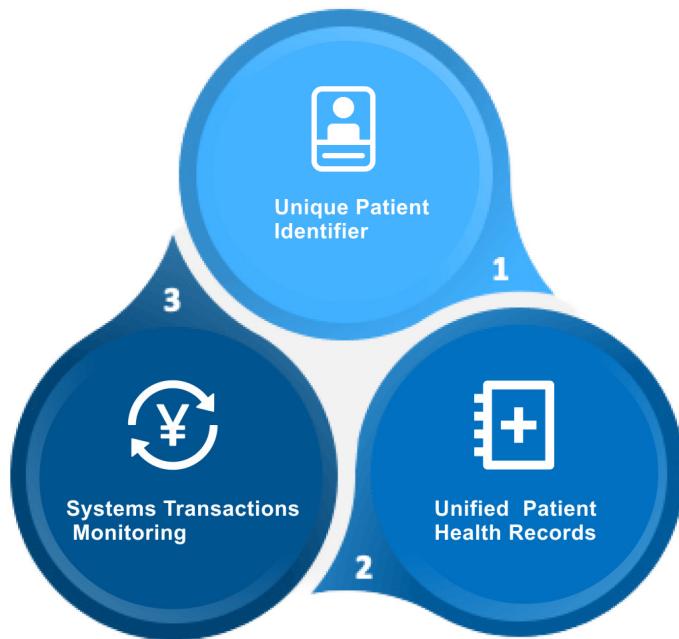

The Electoral Information Management System, featuring advanced technology, seeks to improve service delivery by cutting costs and time while increasing transparency. It includes modules for database integration, verification, and validation; computes election scores; manages registration and volunteer eligibility; and offers detailed reporting and dashboards.

HEALTH INFORMATION EXCHANGE-HIE

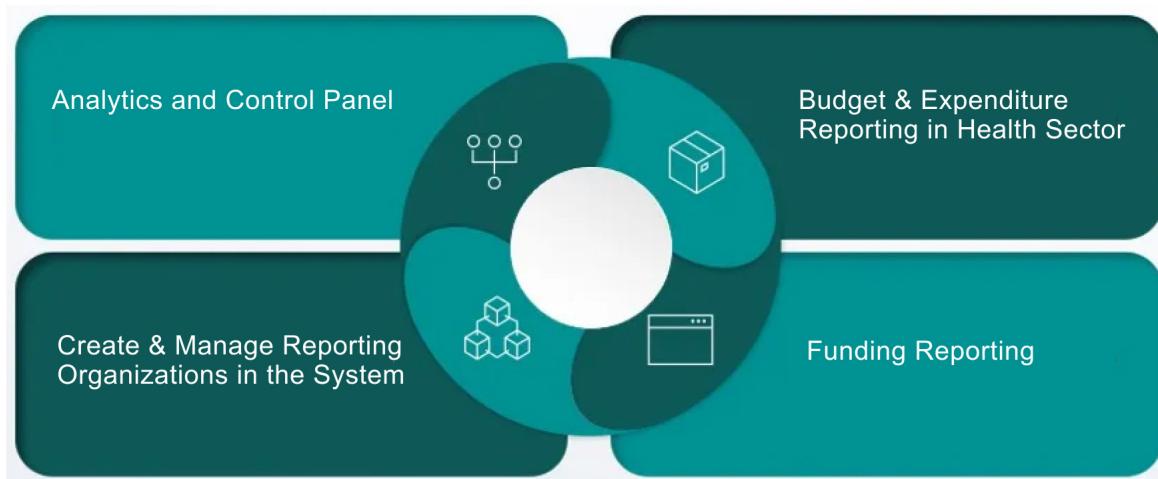

An integrated ecosystem that consolidates patient data from multiple healthcare providers, eliminating fragmented medical records. This system enhances data sharing, ensures continuity of care, minimizes redundant tests and procedures, and streamlines treatment processes. This system facilitates interoperability across systems within the digital health ecosystem.

HEALTH RESOURCES TRACKING TOOL-HRTT

The Health Resources Tracking Tool enables reporting of budgets and expenditures at different levels of the health sector as well as capture flow of funds. The tool provides real-time visibility into the flow and usage of funds within the health sector while automating data entry, enhancing transparency, improving resource allocation, ensuring compliance, and allowing for efficient scaling to meet the growing needs of the sector.

ELECTRONIC MEDICAL RECORD-EMR

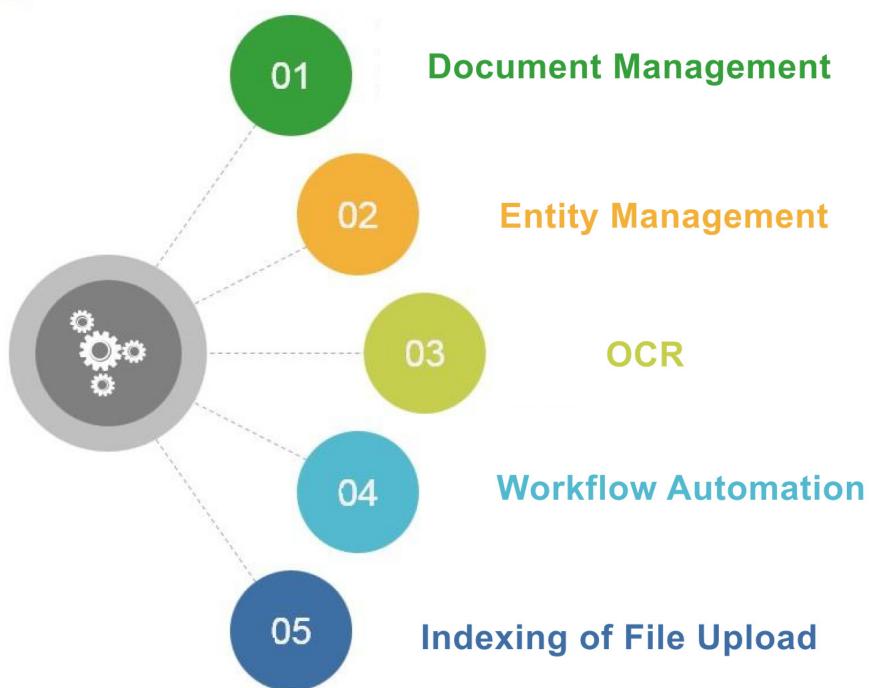

The Electronic Medical Record (EMR) system leverages advanced technology and user-centered design to enhance efficiency, productivity, and data accuracy in healthcare facilities. It ensures better compliance and reporting while providing seamless access to patient information and improving overall care delivery.

ELECTRONIC DOCUMENT MANAGEMENT SYSTEM-EDMS

A system designed to digitize, archive, and retrieve records for any institution. It preserves critical data and offers advanced analytics, equipping decision-makers with actionable insights for strategic planning and effective management.

E-CORRESPONDENCE SYSTEM

The E-Correspondence System allows business stakeholders to access company services efficiently through an online portal. Users can submit requests, track applications, and receive timely responses without the need for physical interaction with company staff.

UNIT HOLDERS MANAGEMENT SYSTEM- UHMIS

UHMIS is an integrated system that aims to support business processes, investment and investor management, HR, payroll, fund administration, accounting, financial activities, and asset management. It integrates with external systems such as payment gateways to ensure full functionality.

KORA JOB PORTAL

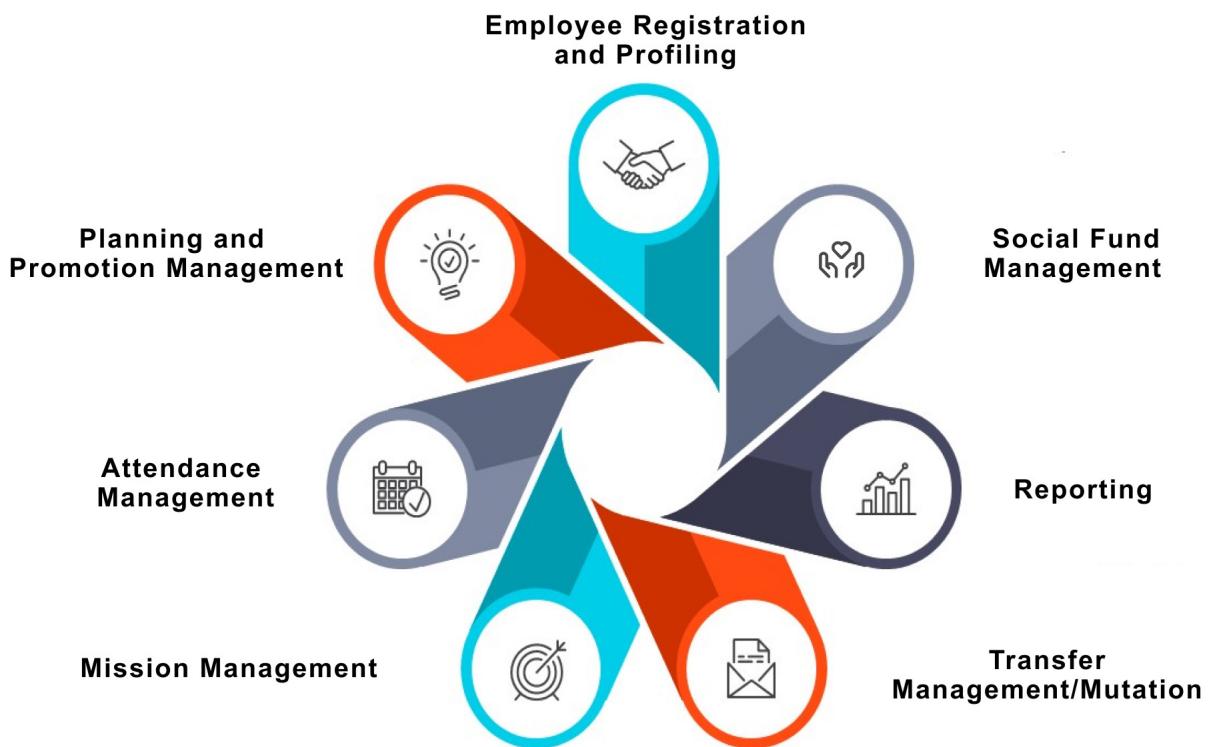

A system designed to connect job seekers with potential employers, streamlining the recruitment process by matching candidates' skills and qualifications with employers' needs. This innovation enhances job accessibility and ensures a more efficient job search experience for all parties involved.

INTERNAL PROSECUTION SUPPORT SYSTEM-IPSS

The system is designed to support internal prosecution by generating reports and assisting employees in their daily activities across departments and branches.

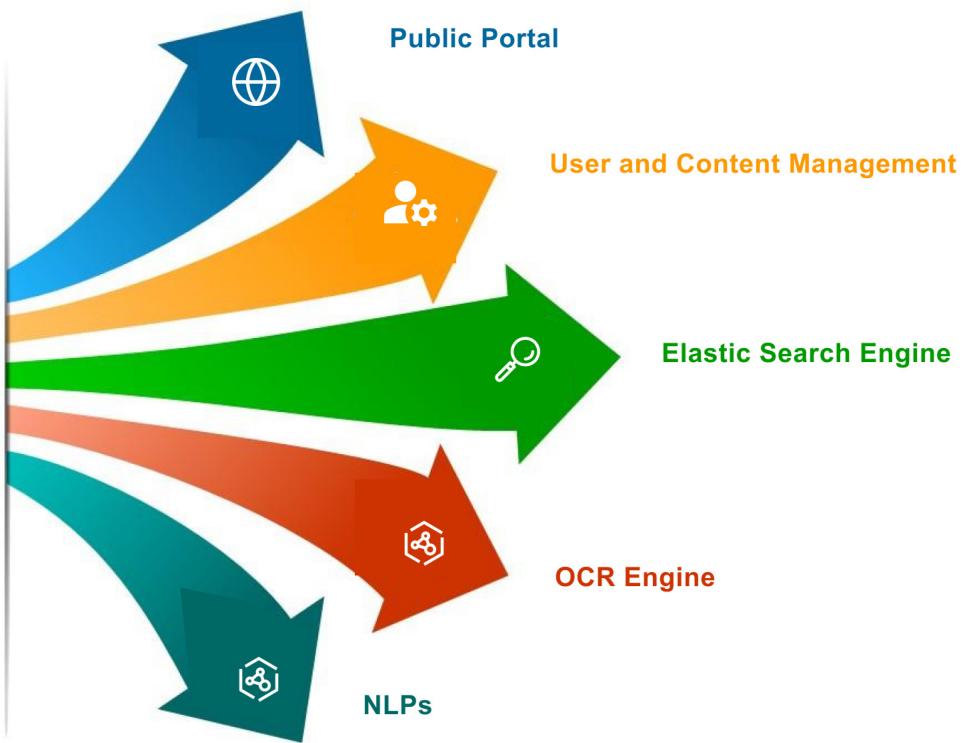

AMATEGEKO WEB PORTAL

Amategeko web application provides public access to a comprehensive collection of laws and case laws through a user-friendly portal. It features an admin portal for efficient management of legal content and integrates an elastic search engine with NLP capabilities for accurate and relevant search results. Additionally, it uses OCR technology to extract text from images and PDF Files, making them searchable.

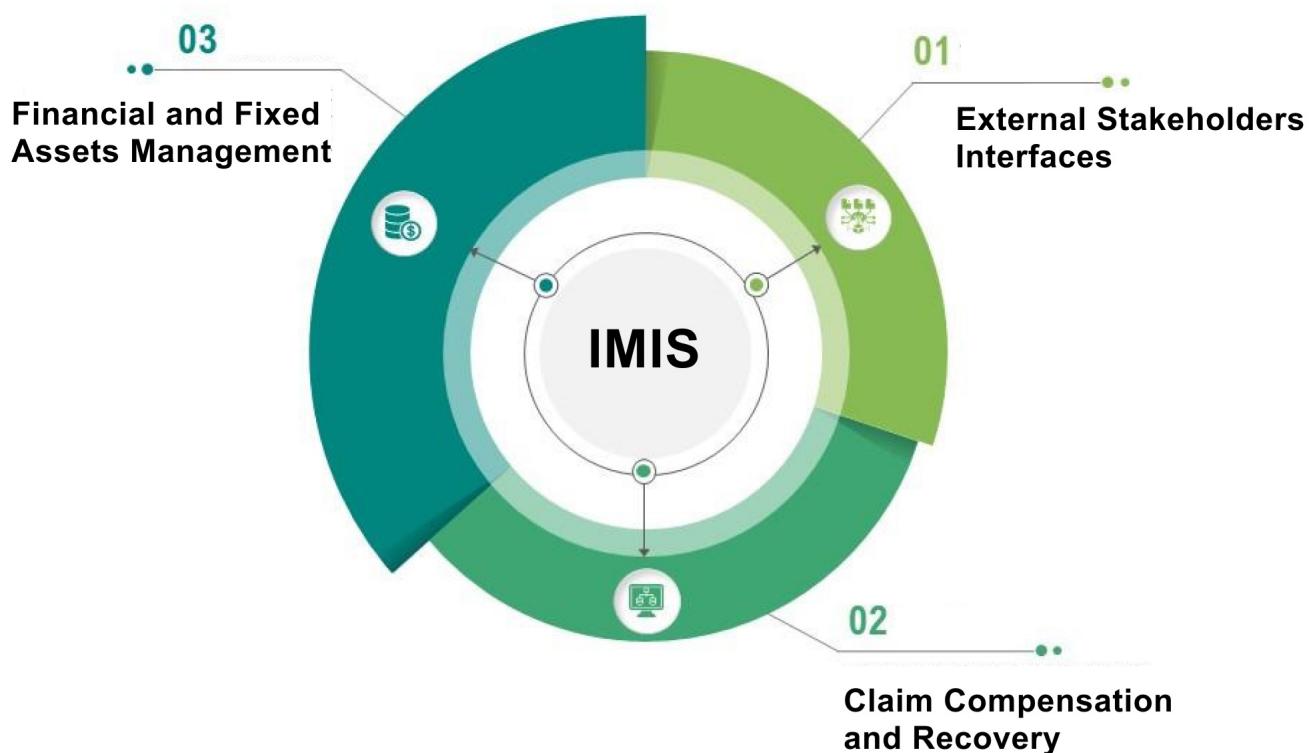

AMATEGEKO WEB PORTAL

INTEGRATED MANAGEMENT INFORMATION SYSTEM-IMIS

The Integrated Management Information System (IMIS) was developed to enhance the timeliness and effectiveness of operations related to compensating victims of damages or injuries. In addition, the system aims to collect comprehensive data and generate timely and reliable reports that contribute to informed decision-making processes.

SMART WORKFLOW SYSTEM-SWS

The system sought to transform institutional efficiency through automated approval process enabling smooth and paperless workflows.

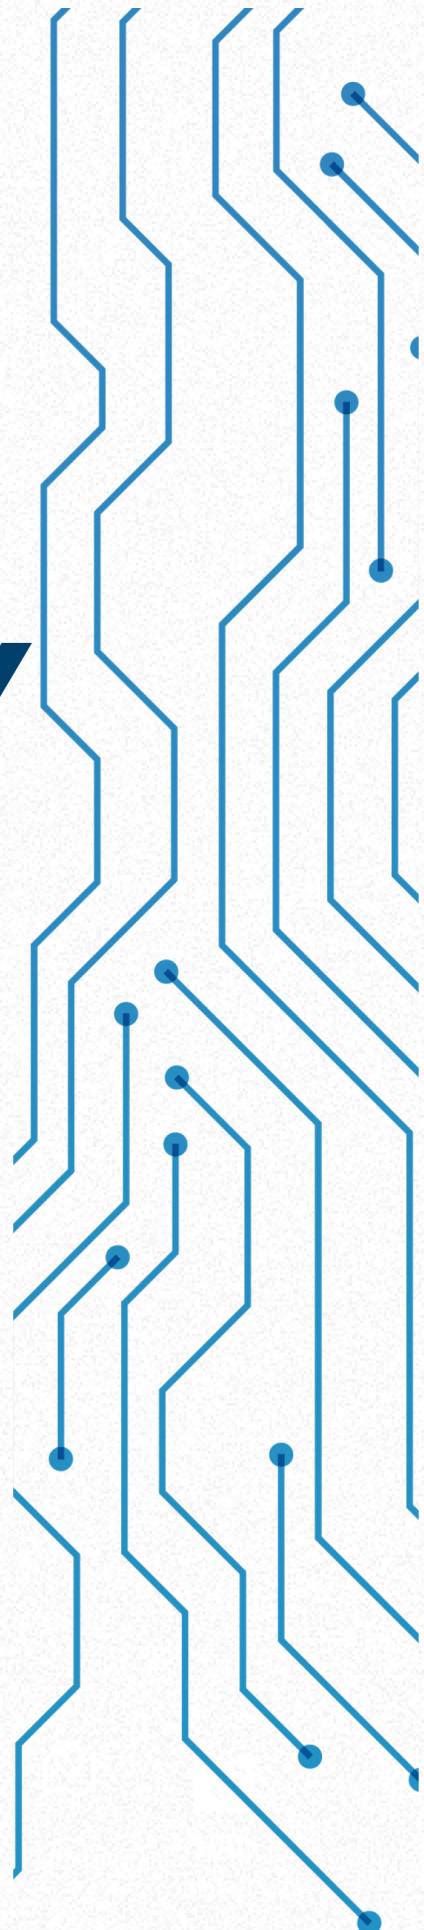

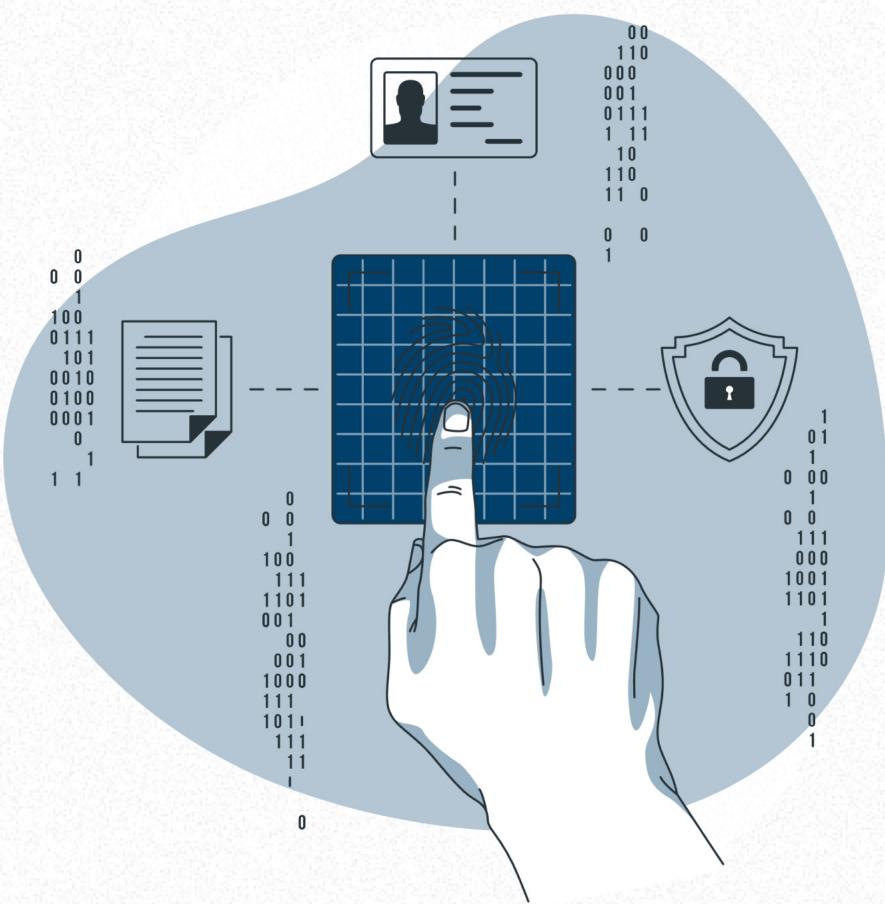

INSPECTION AND CERTIFICATION SUPPORT SYSTEM-CSS

The Agricultural Inspection and Certification Support System is a comprehensive platform integrating services for agricultural inspection, certification, and tracking. Used by certifying authorities, seed growers, traders, and other stakeholders. It streamlines registration, variety release, inspection, and certification processes. The platform enables stakeholders to verify seed authenticity and access detailed information.
